WASHING MACHINES

‘54% of the UK cite energy efficiency as an important factor when choosing products.’ Source: LG Simply Living 2009

LG Washing machines are designed to make big changes to the way you do your wash. The little details on each machine are designed to help you look after your clothes better, manage your time better and look after the environment better.

BRINGING GREAT IDEAS TO LIFE!

Looking for better washing power? Increased economy? More capacity? LG Washing Machines bring bright ideas and the very best new technology to your laundry.

Direct Drive

- More durable
- Bigger capacity
- Shower spray
- Additional features: new embossed drum & large door opening

Steam Direct Drive

- Steam saves water and energy
- Steam refreshes without washing
- Steam washes better
- Steam removes allergens

Direct Drive

Inverter DirectDrive

The Direct Drive Motor guarantees low noise and low vibration with longer durability.

WHAT IS THE DIRECT DRIVE SYSTEM?

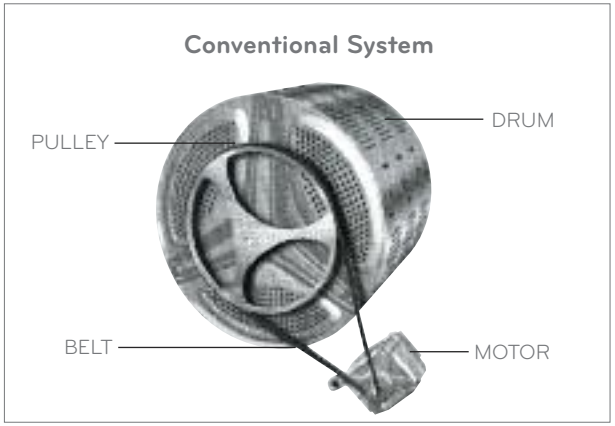
Direct Drive System is a state of the art technology which integrates motor, belt and pulley into a single Quiet and Durable Motor that is attached directly to the drum.

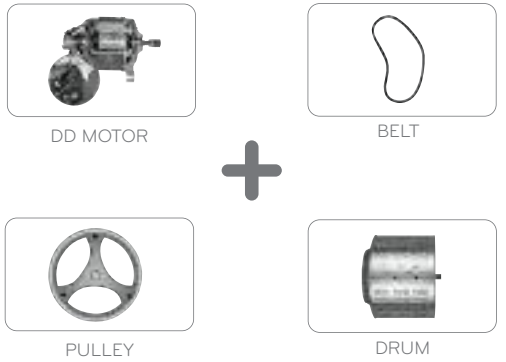
DURABILITY

Less Parts mean Less Trouble
Without a belt and pulley, LG's Direct Drive system reduces the causes of defects and increases durability.

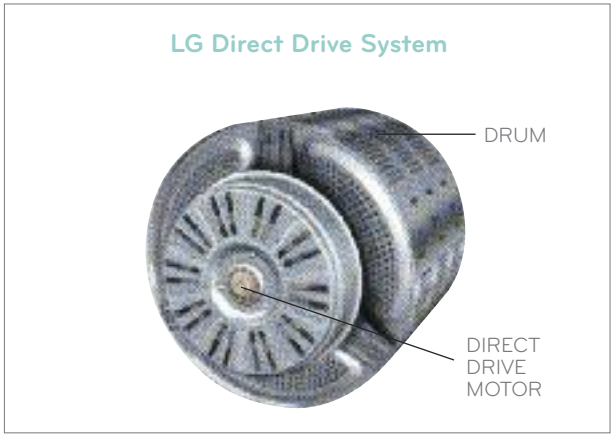
Less Vibration
Having the motor attached directly to the centre of the drum results in a more stable balancing system.

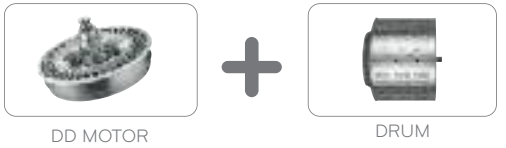
Low Noise
By removing the brush, LG's Direct Drive system eliminates unpleasant frictional noises.





- Unpleasant noise and vibration
- Wear-out of belt and its replacement





Motor directly attached to the centre of drum:

- Increased Stability, Minimal Vibration
- Less Noise – no frictional noise
- Increased Durabilty – fewer moving parts
- Increased Energy Efficiency – direct power onto drum resulting in no loss of energy

DD Motor 10 YEAR WARRANTY

10 year Direct Drive motor parts warranty.

2 year manufacturer warranty on all other parts and labour.

LG DIRECT DRIVE

LG
Life's Good

A LOT LESS WOBBLE

DURABLE

NO BELTS, NO PULLEYS, NO PROBLEMS

The LG Direct Drive motor is so clever it has a unique magnet system to rotate the drum. The motor has no brush which is why it is super quiet and no belt or pulley which enhances durability. This super motor is then joined directly to the drum without additional parts, creating a perfectly balanced unit.

Less parts mean less trouble... Life's Good

*10 year warranty applies to Direct Drive motor parts.

Direct Drive

BIG CAPACITY

Having a bigger drum with more capacity is better for you and your wash.
Less creasing: The bigger drums in LG Direct Drive washing machines help to prevent creases and damage caused by excessive rubbing in machines with smaller drums.

More washing: Our bigger drums will allow you to do more washing in one load, so saving time, energy and water.

Convenience: Having a bigger capacity means you can now save time and money by washing bulky items like curtains, duvets or even quilts.

Space efficient: LG washing machines are bigger on the inside but not the outside. LG Steam or non Steam Direct Drive washing machines are the same size as standard machines but have a bigger drum.

LARGE TRANSPARENT DOOR

For easy loading and unloading.
The door to our washing machines is one of the widest there is. It will open fully to allow you to load and unload big and bulky items, and it looks good too.

SHOWER SPRAY

The Shower Spray is a circulating shower function that repeatedly pumps water from the bottom of the drum to the top where it is sprayed into the drum during the washing and rinsing process. The Shower Spray ensures detergent is completely dissolved, improving wash performance. It significantly reduces water consumption which means less electricity is needed to heat up the water. It reduces running costs, saving on energy and water bills.

NEW DRUM AND WAVED LIFTER DESIGN

Avoid wasteful energy consumption.
The drum on LG washing machines has been designed with a surface texture that increases the amount of contact with the fabrics in your wash. This creates a better washing action to remove more dirt and stains. The drum perforations also help to increase the speed of water circulation for more cleaning power and to stop clothes from sticking and creasing at the end of the wash cycle.

During a wash cycle, the Waved Lifter feature moves the clothes from the bottom to the top of the drum. This creates a more powerful "pounding effect" which helps to separate dirt and stains from fabrics and gives your clothes a deeper clean.

WOOLMARK

The wool cycle of the LG Direct Drive has been approved by Woolmark for washing machine washable wool products*

* Provided that the items are washed according to the manufacturers instructions as printed on the garment label.

STANDBY POWER ZERO

Save Energy: Standby lights on all LG Direct Drive machines automatically switch off after a set amount of time.

Direct Drive

INTELLIGENT WASHING SYSTEM

Can wash as little as 2kg of washing in any size drum.

Inverter DirectDrive

LOAD BALANCE

This Load Detection System cycle weighs the loaded laundry and automatically selects the optimum wash time, rinsing time and water consumption.

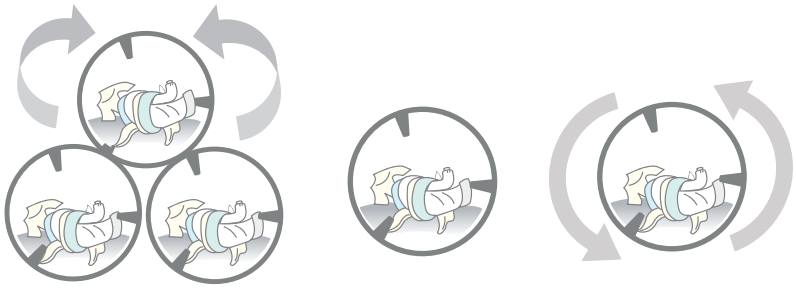
By selecting the optimum programme, energy and water consumption can be lowered.

DETECTS IMBALANCES AND DETANGLES

LOAD DETECTION SPIN RHYTHM → CALCULATES THE ADEQUATE WASHER DETECTS

No Wobbling:

The unique side to side action prevents creases, tangles and vibrations.
This can be accredited to the drum that has been joined directly to the motor, creating a perfectly balanced unit.



Steam Direct Drive

In a world of steam...
Clothes can be clean in 20 minutes. Creases disappear without ironing.
You spend more time with your family and less time with your laundry.
And you get to save money while reducing your carbon footprint.
Welcome to the new world of steam.

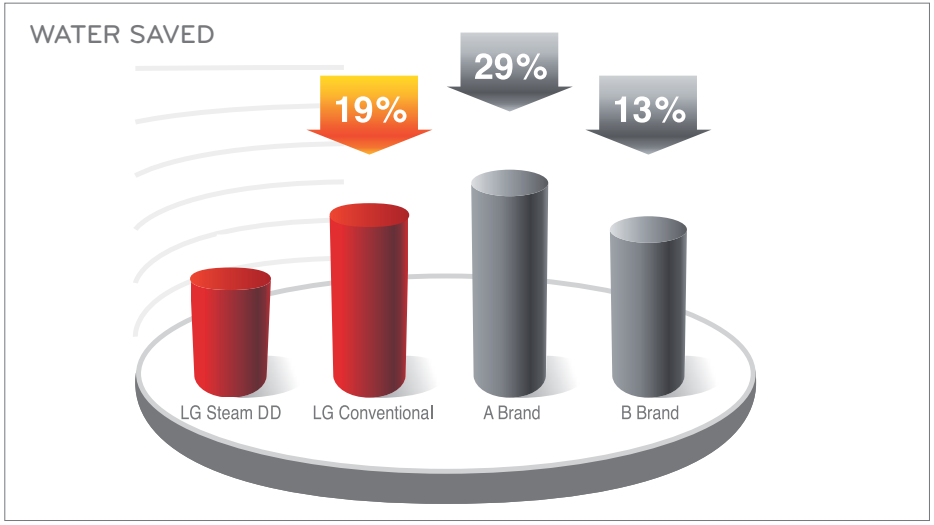
STEAM SAVES

With our new technology Steam Generator you get remarkable savings in water and energy consumption.

STEAM SAVES WATER

Steam particles are smaller than water droplets and can penetrate fabrics better. This improves the washing performance and the water consumption.

LG Steam Direct Drive will reduce water consumption by as much as 19% when compared to a similar non-steam LG machine and up to 29% when compared to a conventional 8 kg capacity washing machine.

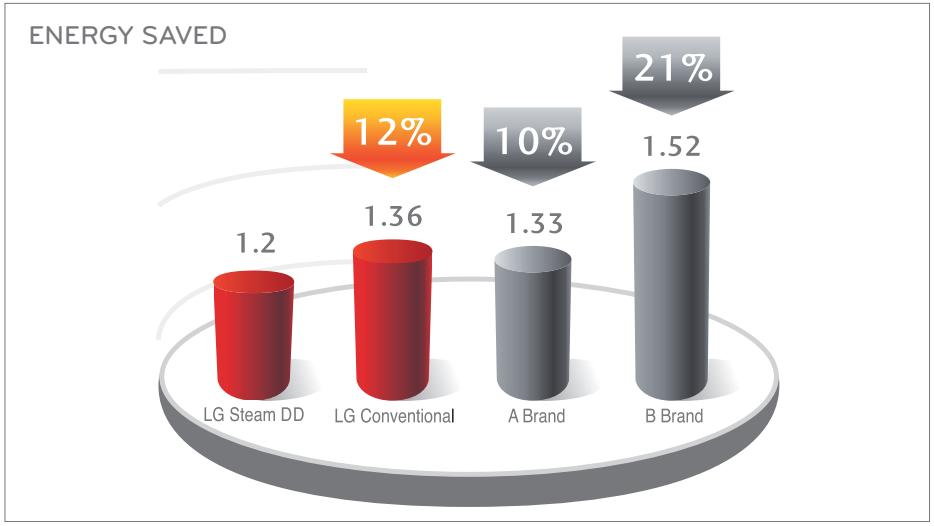


Comparison: 8kg > Compacity Washing Machine

STEAM SAVES ENERGY

Conventional machines consume more water than the LG Steam Direct Drive Washer and require more energy to both heat up and circulate. With steam, less energy is needed because a smaller amount of water is used. The dual spray system releases simultaneously steam and water into the drum improving heating efficiency and time. Over the course of one year's laundry, this translates to a savings of one month's water and energy bills. That's good for your pocket as well as the environment.

LG Steam Direct Drive will reduce energy consumption by as much as 21% when compared to a conventional 8kg capacity washing machine. The machine is energy rated at A++. This is 20% more efficient than the A class standard (0.19 kWh/kg) in the A-G energy rating system.



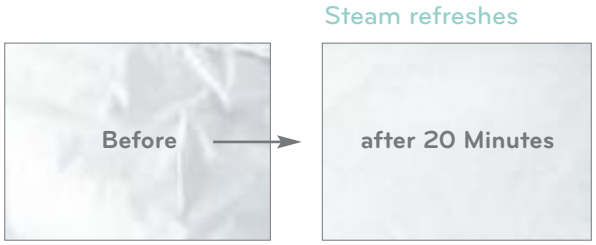
Comparison: 8kg > Compacity Washing Machine

Steam Direct Drive

SPA CLEAN CLOTHES WITH STEAM

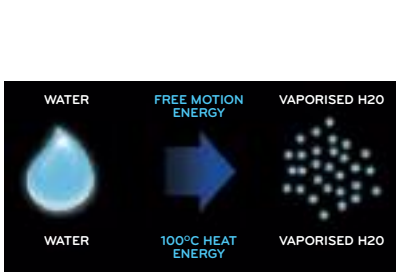
Steam is the most intense form of cleaning because steam molecules are 1600 times smaller than water particles allowing them to penetrate right into the fabric and remove far more dirt than a normal wash. Steam Cleaning will remove ingrained dirt from anything – giving even the grubbiest sports kit a makeover.

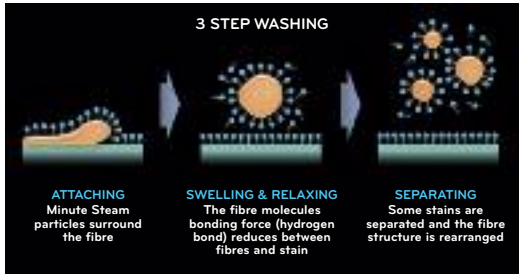
Unique Steam refresh function gives you less ironing
We've all been in that situation. You need your clothes cleaned and ironed, but you just don't have the time. Now, thanks to Steam Refresh, you simply place the garments in your machine and 20 minutes later creases and odours are significantly reduced. Rather than use detergent and water, Steam Refresh harnesses the gentle power of steam to remove odours and creases, saving you time and trouble.



BETTER WASHING PERFORMANCE

The tumbling washing action along with the adjustable water temperatures result in a superior washing performance.
Steam penetrates deeper into your wash. Steam molecules are smaller than those of water, so steam gets in between fabric fibres. Because each type of stain has a different optimum wash temperature, steam raises the temperature in steps to allocate enough time to remove each stain stype. Water cannot do this.





3 STEP WASHING
ATTACHING
Minute Steam particles surround the fibre
SWELLING & RELAXING
The fibre molecules bonding force (hydrogen bond) reduces between fibres and stain
SEPARATING
Some stains are separated and the fibre structure is rearranged

SPECIAL FEATURES

ALLERGY CARE

Proven to remove more household allergens.
The mites, pollen, fungus and pet hair in fabric are often the cause of your family's allergies. Unlike boiling water, steam can maintain the optimum heat required to dissolve away allergens. Compared to conventional machines, the British Allergy Foundation proved that we remove more common household allergens.

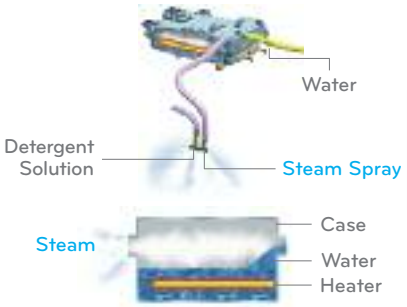
Steam kills more germs.
The LG Steam Direct Drive Washer is designed to eradicate virtually all bacteria and germs from your wash. Steam is able to attain the temperatures needed to properly sanitise the clothes that your family wears, leaving you free from worry.

A healthy home: A combination of tiny steam particles and a 10 minute spin at 60 degrees washes out dust, pollen and 99.98% of dust mites – eliminating annoying allergy enhancers from your clothes, sheets and towels.

Steam Direct Drive

DUAL SPRAY SYSTEM

Dual Spray System reduces water and energy consumption.
In our pioneering Dual Spray System, steam and water work together. One nozzle sprays steam onto your wash while the other delivers concentrated detergent water to begin cleaning instantly. Steam loosens stains, water washes them away.

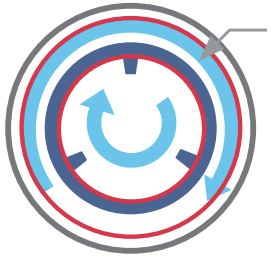


LG TUB CLEAN

Conventional Tub Clean
In conventional Tub Clean programmes the drum gets washed but is not properly cleaned due to a reduced spinning speed.

Top and Side of the tub is not cleaned

LG Tub Clean
In our Tub Clean system steam, heated to 85°C, is used to sterilize the interior of the drum and the tub.



The whole tub is clean

SPACE EFFICIENT

LG Steam Direct Drive Washer is only big on the Inside. It still remains the standard size and can fit into any home.

The drum surface boost cleaning power and the waved lifts the dirt of cloths. The surface texture of the Embossing Drum increases the amount of contact with the fabric. This creates a better washing action and removes more dirt and stains. The perforations help to increase the speed of water circulation throughout the wash for even more cleaning power.

These perforations also stop your clothes from sticking fast with creases at the end of the wash. The Waved Lifter feature moves the clothes from the bottom to the top of the drum, creating a more powerful "pounding effect". This effect helps to separate dirt and stains from fabrics and gives clothes a deeper clean.

WOOLMARK

The wool cycle of the LG Steam Direct Drive has been approved by Woolmark for washing machine washable wool products*

* Provided that the items are washed according to the manufacturers instructions as printed on the garment label.

WOOLMARK

Programme Selection

From bulky items to small items, difficult stains or delicate fabrics, your LG Washing machine will have a washing programme that's specially designed for it. Choose from:

BABY CARE
Babies need to be protected from harmful bacteria and allergens whilst baby skin is sensitive and easily irritated by detergent. So any baby wash needs to be gentle and effective. Baby clothes also get washed often and are easily damaged.

The LG Baby Care programme destroys and removes allergens and clears all traces of Detergent. It performs a Medic Rinse – Warm Rinse (40° C), Rinse More (5 times) and High water level rinse.

BOILING CARE
This programme is for clothes with difficult protein stains like chocolate or milk on them.

BIO CARE
This is for frequently washed and easily damaged clothes.

HAND WASH/WOOL
For delicate, machine washable woollen items* (*Always follow the manufacturers instructions)

DELICATE
Delicates that can't stand up to heat or friction need a delicate wash. Perfect for underwear.

SPIN
This programme is for spinning your laundry.

COTTON
This is a general wash programme that most suited to washing cotton fabrics.

COTTON QUICK
This is a shorter version of the COTTON programme.

SYNTHETIC
For washing synthetics like polyester and nylon.

BED COVER
This wash enables you to wash heavy fabrics like bed covers and curtains.

BULKY
If you have large loads, this is the programme to use.

DUVET
For blankets, curtains and lighter quilts.

QUICK 30
When you need a quick wash, this cycle takes just 30 minutes, including wash, rinse and spin.

RINSE+SPIN
If you are hand washing or have wet clothes you can use this setting for rinsing and spinning.

RINSE+, RINSE++
It adds one or two extra rinses to the default normal rinse times in the wash programme. (The number of rinses is fixed depending on washing cycles).

MEDIC RINSE
This programme minimises detergent residue. It uses a high level rinse and warm (40° C) rinse which dissolves residues, lifts them and washes them away with warm water.

RINSE HOLD
Once the rinse is complete this function adds another rinse. It does not drain the drum but waits for the user to initiate the spin cycle.

REFRESH
This programme uses a fine steam spray to penetrate fibres, remove creases and eliminate odours. It also works to soften fabrics. It is fast, effective and eco-friendly.

NORMAL+ HOLD
Once the rinse is complete this function does not drain the drum but waits for the user to initiate the spin cycle.

INTENSIVE
This programme can be selected to increase the wash time for badly soiled items.

CREASE CARE
If the wash is likely to sit in the drum for a while after the wash has finished, this programme will prevent the laundry from becoming wrinkled.

INTENSIVE 60
Intensive 60 is a 60 minute wash programme that gives a superior wash performance when time is not on your side. It defaults to 60 degrees for removing ground-in dirt but can be manually changed to wash at cold, 30 or 40 degrees.

HALF LOAD
The Half Load option overrides the machine's automatic load detection system, reducing the length of the wash cycle whilst giving you an optimum wash performance.

WASHER DRYERS

‘One third of Brits said they wanted to spend less time on household chores.’ Source: LG Simply Living 2009

LG Washer Dryers are intelligent and intuitive. Every detail has been designed to make your life easier. They will save you time, look after your clothes and look after themselves too.

BRINGING GREAT IDEAS TO LIFE!

Looking for better washing power? Increased economy? More drying capacity? LG Tumble Washer Dryers bring bright ideas and the very best new technology to your laundry.

Washer Dryer

- Convenient
- Space saving
- Low humidity
- Low noise level
- Cost efficient

Washer and Dryer Combination

CONVENIENT

LG Washer Dryers combine the washing and drying process, allowing you to wash then dry your load without any need for intervention* giving you the freedom to do your washing whatever the weather.

*6kg max of dry weight washing for the wash/dry programme

WOOLMARK

The wool cycle of the LG Washer Dryer has been approved by Woolmark for washing machine washable wool products*

* Provided that the items are washed according to the manufacturers instructions as printed on the garment label.

WOOLMARK

BIG CAPACITY

The new LG Washer Dryer allows for up to 9kg of washing and 6kg* of drying, giving you the flexibility to wash bulky line-dry items such as curtains and blankets as well as being able to wash and dry loads of up to 6kg on a wash dry cycle.

*6kg dry weight

DIRECT DRIVE

The LG Direct Drive motor is so clever it has a unique magnet system to rotate the drum. The motor has no brush which is why it is super quiet and no belt or pulley which enhances durability. This super motor is then joined directly to the drum without additional parts, creating a perfectly balanced unit.

Inverter DirectDrive

DD Motor 10 YEAR WARRANTY

10 year Direct Drive motor parts warranty.

2 year manufacturer warranty on all other parts and labour.

SPACE SAVING

Where space is limited, LG Washer Dryers are the perfect solution, giving you washing and drying functionality without needing space for 2 separate machines.

LOW HUMIDITY

The LG Washer Dryer uses a condensing dryer system. Unlike conventional ventilation dryers, this system releases moisture from the drying clothes straight into the main drain, preventing a build up of humidity that can cause damp from forming on your walls and floors.

COST EFFICIENT

Not only will the LG Washer Dryer save you space but it will also save you money, being much more cost effective to buy than a washer and separate dryer

Programme Selection

The LG Washer Dryer can be used as a washing machine, as a dryer, or by selecting a continuous Wash/Dry programme as both, giving you the maximum amount of flexibility in a minimum amount of floor space.
The LG Washer Dryer offers various, simple-to-select programmes that can be combined with a range of additional options allowing you to select the optimum programme for each wash. The programme adjusts the temperature, spin speed and washing motion of the LG Washer Dryer depending on the type of fabric being washed or dried, giving great results with minimum effort every time you use it.

BABY CARE
Babies need to be protected from harmful bacteria and allergens whilst baby skin is sensitive and easily irritated by detergent. So any baby wash needs to be gentle and effective. Baby clothes also get washed often and are easily damaged

The LG Baby Care programme destroys and removes allergens and clears all traces of Detergent. It performs a Medic Rinse – Warm Rinse (40° C), Rinse More (5 times) and High water level rinse

COTTON
A general 40 degree wash programme suitable for most cotton fabrics

COTTON-QUICK
For use when you are on the run or your cotton fabrics are only lightly soiled, Cotton-Quick will complete a wash cycle in a shorter amount of time

SYNTHETIC
For use when washing synthetic or mixed fabrics

DELICATE
For fragile items that need washing at a low temperature on a gentle cycle

HAND WASH / WOOL
For delicate, machine washable woollen items* (*Always follow the manufacturers instructions)

QUICK 30
A quick wash programme for lightly soiled items

DUVET
The 8kg or 9kg drum size allows you to wash a 9 tog King Size duvet

WASH & DRY
Washes and dries a load of up to 6kg in one continuous cycle

ADDITIONAL OPTIONS

PREWASH
Use this option for loads that need pretreatment, such as stained or soiled items

RINSE HOLD
Adds one extra rinse to the programme and then holds the water in the machine to help prevent wrinkles

NORMAL + HOLD
Once the normal rinse is complete this programme holds the water in the machine to help prevent wrinkles

RINSE +
Adds one extra rinse to the selected programme

RINSE ++
Adds to extra rinses to the selected programme

RINSE+SPIN
For clothes that are already washed and only need rinsing and spinning

MEDIC RINSE
During the last rinse of the cycle the temperature is kept at an optimum level of 40°C. This removes detergent residues which may be harmful to those with sensitive skin

INTENSIVE
By selecting this option the wash time is extended giving a more intensive wash cycle

TUB CLEAN
A 15 min. sterilisation programme that cleans the interior of the drum using steam at 85°C, cleaning every corner of the tub for perfect results. Run once a month to keep your tub in top condition

SPIN ONLY
For wet loads that just need spinning

NO SPIN
For more delicate items that will be damaged by spinning

CHILD-LOCK
Stops small fingers from pressing buttons they shouldn't

TIME DELAY
The Washer Dryer can be programmed to finish between 3 to 19 hours after this option is selected, meaning clothes are fresh from the wash at a time to suit you whilst reducing creasing found in garments that are left in the machine for too long

FAVORITE
Set your own programme with additional options and save to Favorites for easy selection next time round

TUMBLE DRYERS

‘40% of Brits believe they spend too much time on their laundry with over a third of people putting on a wash daily.’

Source: LG Simply Living 2009

LG Dryers are intelligent and intuitive. Every detail has been designed to make your life easier. They will save you time, look after your clothes and look after themselves too.

BRINGING GREAT IDEAS TO LIFE!

Looking for better drying power? Increased economy? More capacity? LG Tumble Dryers bring bright ideas and the very best new technology to your laundry.

Tumble Dryers

Ideas for increasing capacity

- Big glass door
- Bigger Drum size
- Bigger capacity

Ideas for saving energy

- HE Sensor
- Efficient tumbling control
- Sensor Dry technology

Ideas for making life easier

- Water tank sterilisation
- Tailored drying programmes
- Wider door
- Quiet Operation

Ideas for increasing capacity

BIG CAPACITY

With its large glass porthole door, the stylish design of the LG Dryer perfectly compliments the LG Direct Drive washing machine.

LG Dryers are designed to dry up to 8kg or 9kg of washing, depending on the model you have chosen and the washing machine you have, allowing you to swap your load from washer to dryer with the minimum of fuss, drying a full load in less time than conventional dryers.

The larger drum is great for drying bulky items such as curtains, blankets or down jackets whilst the increased space inside the LG Dryer means clothes get less tangled and creased, saving hours of ironing.

BIG GLASS DOOR

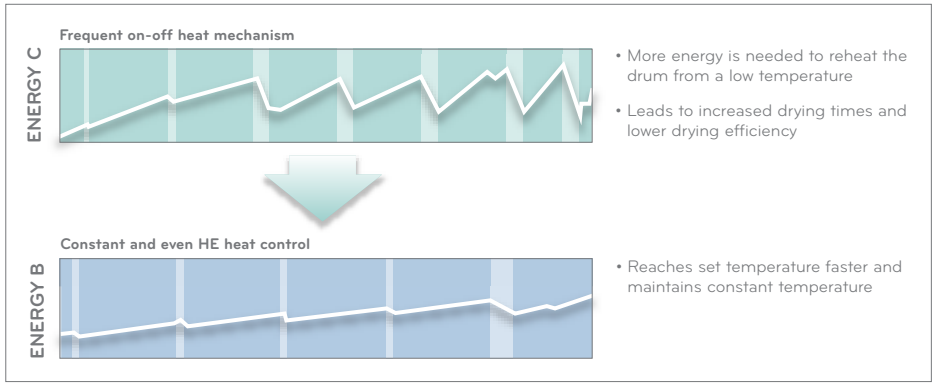
The 9kg Dryer's big door takes up less space than conventional dryers giving a bigger capacity.

The new glass in the door also allows more space inside the dryer and looks great with LG Direct Drive washing machines.

Ideas for saving energy

HE HEAT SENSOR

Unlike most dryers where heaters constantly switch on and off, LG's unique, High Efficient (HE) Heating Sensor allows the LG Dryer to maintain a constant temperature inside the drum which cuts down the energy needed to complete the drying process.



Frequent on-off heat mechanism
ENERGY C
• More energy is needed to reheat the drum from a low temperature
• Leads to increased drying times and lower drying efficiency
Constant and even HE heat control
ENERGY B
• Reaches set temperature faster and maintains constant temperature

SENSOR DRY

Sensitive Drying: The LG Dryer continually senses how much moisture is in the load by measuring the humidity in the tub, allowing it to dry clothes perfectly every time according to the programme selected.

EFFICIENT TUMBLING CONTROL

Unlike most conventional dryers, the LG Dryer tumbles the load as the drum turns from side to side, preventing tangling, reducing creasing and giving evenly dried clothes in the minimum amount of time.

Ideas for making life easier

STERILISATION ON WATER TANK

If you forget to empty the water tank in your dryer, you won't have to worry about bacteria.

Coated anti-bacterial substances in the water tank will prevent contamination.

DRUM LIGHT

When the door is opened, the blue LED drum light automatically lights up the inside of the LG Dryer making it easier to see what is being loaded and unloaded by brightening the drum.

EXTREMELY QUIET OPERATION

LG's LoDecibel Quiet System uses an anti-vibration motor, one-piece casing design and absorption sheets for noise reduction.

TAILORED DRYING PROGRAMMES

The LG Dryer has a pre-set drying programme to meet; every drying need, including new programmes for hard-to-care-for Wool and Delicates as well as Sportswear (ski and climbing gear) and a new Quick Dry programme.

Automated drying levels can be selected under Cottons or Mixed fabrics, all on an easy to use Dial-a-Cycle.

Programmes can be supplemented with Crease Care and Time Delay functions amongst others.

Programme Selection

The LG Dryer uses Sensor Dry technology, operating in 3 different modes designed specifically for Cotton, Mixed Fabrics and items that need Special Care. Within each of these categories is an array programmes and options that can be used in lots of different combinations to dry even the most difficult items.

If none of the preset programmes seems to fit the bill, simply select the more traditional Cool Air or Warm, or be creative and design your own drying programme, saving it as a Favorite.

SENSOR DRY

COTTON: Extra Dry, Very Dry, Cupboard Dry, Light Dry, Iron Dry

MIXED FABRICS: Very Dry, Cupboard Dry, Iron Dry

EXTRA DRY
Ideal for drying very thick or quilted fabrics

VERY DRY
Ideal for drying thick or lightly quilted fabrics

CUPBOARD DRY
Dries items that do not need ironing, like socks and underwear

IRON DRY
Leaves a level of moisture in the clothes to allow for easy ironing

QUICK DRY NEW
Technology allows the temperature inside the drum to reaches its optimum more quickly, decreasing drying times

SPECIAL CARE NEW

WOOL
Selecting the Wool programme means woollen items can be safely dried without shrinking or creasing

DELICATE
A gentle drying cycle for fragile lingerie and easily damaged items

SPORTSWEAR
Optimal drying performance for fabrics with special finishes and coatings, such as skiwear and outdoor gear

BULKY ITEMS
The large door opening means easy loading and unloading of bigger items. Designed for drying bigger items such as blankets, duvets, pillows and rugs, curtains or winter jackets

TIMED DRYING
Cool Air, Warm

ADDITIONAL OPTIONS

GENTLE
Select this option when a low temperature is required for extra tender care

BUZZER
Allows you to select a bleep when items are ready for ironing. Also buzzes the end of the cycle allowing you to remove clothes before they become creased. Can be switched off allowing the LG Dryer to run at night without disturbing your sleep.

ANTI CREASE
When immediate unloading is impossible and your LG Dryer contains items that crease easily, select the Anti Crease option. The LG Dryer will continue to run intermittently after the cycle has finished, moving the items around and making ironing easier

FAVORITE
Select your most used programme with all the options you like then save to Favorite. Your LG Dryer will memorise it for you, allowing for simple selection the next time you use it

TIME DELAY
If you want your items freshly dried but need to leave the house, select the Time Delay option and choose a drying programme-end time anywhere between 3 and 19 hours later on.

CHILD LOCK
Prevents small fingers from pressing buttons they shouldn't!

DRUM LIGHT
Although the drum light comes on automatically when you power on the LG Dryer, select this option if you want to see inside the dryer whilst it is in operation.

CREASE CARE
Additional help to prevent creases and rumples forming during the drying process

LG
Life's Good

LG Electronics UK Limited · 250 Bath Road · Slough · Berkshire · SL1 4DX · United Kingdom · T.: 0870 8735 454 · www.lge.co.uk

Information on the complete range of LG Electronics consumer products is available on our website. You can also download a PDF file or request a hard copy to be sent (please visit www.lge.co.uk/brochure). The design and specifications of products are constantly changing in the interest of improvement. Whilst every care has been taken in the preparation of this catalogue, some changes may have occurred since publication.
LG Electronics cannot accept responsibility for errors and omissions.

LG Electronics UK Limited have been working closely with their supplier's to reduce their environmental impact on the world. This brochure is printed on HannoArt, a wood free paper produced from totally chlorine free FSC certified pulp. The inks used are formulated from sustainable raw materials and therefore are environmentally friendly. **When you have finished with this brochure please recycle it.**
